AT YOUR CHILD'S NEXT WELL VISIT

WHEN VACCINE GUIDANCE FEELS UNCLEAR, YOUR CHILD'S PROTECTION STARTS WITH A CONVERSATION.

WHAT CHANGED?

Parents are hearing mixed messages about childhood vaccines – what's recommended, what's routine and what their child may need.

What hasn't changed is this: Trusted medical organizations, including the AAP and AAFP, continue to recommend protecting children based on age and risk using the full childhood immunization schedule.

Some vaccines may not always come up automatically during visits, so **parents may need to take a more active role in asking about protection for their child.**

VACCINES TO ASK ABOUT AT YOUR CHILD'S VISIT

If you want your child to be protected, ask your pediatrician about these vaccines because they have been the subject of recent mixed messaging:

- ➔ Hepatitis A
- ➔ Rotavirus
- ➔ Meningococcal
- ➔ RSV
- ➔ Hepatitis B
- ➔ Influenza (flu)
- ➔ COVID-19

3 QUESTIONS TO ASK AT YOUR NEXT VISIT

1. "Based on my child's age, what vaccines do you recommend today?"
2. "Is my child up to date — or do we need any catch-up doses?"
3. "Are there any vaccines we should discuss that weren't covered today?"

WHAT PARENTS SHOULD DO NEXT

- ✓ Bring your child's immunization record to every visit
- ✓ Don't assume a vaccine is "not needed" just because it wasn't offered
- ✓ Ask questions

VACCINATION SAVES LIVES — AND PARENTS CAN HELP PREVENT WHAT'S PREVENTABLE.

LOOKING FOR A RECOMMENDED CHILDHOOD IMMUNIZATION SCHEDULE?

Trusted medical organizations continue to recommend a full childhood vaccination schedule based on your child's age, health and risk.

Parents can find accurate, provider-based guidance from:

- American Academy of Pediatrics (AAP) — aap.org
- American Academy of Family Physicians (AAFP) — aafp.org

American
Academy of
Pediatrics

These organizations support evidence-based immunization policies and the wellbeing of children and families.
